

LEADERS IN ORACLE MAINTENANCE SOLUTIONS

IMPLEMENTATION & IMPROVEMENTS

EAM Masters developed an efficient way to implement Oracle eAM and Oracle Maintenance Cloud - **Virtual Implementation (or) Improvement Program™ (VIP)**

EAM Masters Virtual Implementation/Improvement Program™

A *Virtual Implementation or Improvement Program™ (VIP)* is a project where most of the consulting, training, and implementation support services are delivered remotely via web meetings, VPN access, conference calls and email correspondence. This approach represents a 50% to 60% cost reduction over a traditional “fly-in consulting” project. More importantly, the VIP™ delivers *much better results*.

Better results

The superior results stem from the underlying training philosophy that “an organization that fully understands how to use Oracle eAM and Maintenance Cloud as a tool to manage and improve maintenance, will take full ownership of the system.” Every Virtual Implementation™ program starts with training from day one and continues through setup, configuration, data migration, testing, cutover and post-cutover support. By the project’s completion, customers are fully capable of using, managing and improving Oracle eAM/Maintenance Cloud in a self-sustainable way.

Savings

The most obvious cost savings for a VIP™ is from reduced travel costs. Air-fares, auto rentals, lodging, meals, etc. for onsite trainers and consultants usually makes up 15-20% of the total cost of a traditional “fly-in consulting” project. Using a remote training and support approach, “virtually” eliminates these costs. An additional 30-40% savings comes from resource efficiencies. Our standardized learning programs guide the entire implementation process while well-designed templates automate development of all project deliverables. In other words, it is simply a more efficient way to educate the users and accomplish the multitude of tasks required.

More Information

For more detailed information and to fully understand the VIP™ an EAM Masters consultant would gladly explain/show the program, methods, technology and available options, while learning about your situation and expectations on a brief web meeting. If you plan to implement or improve the use of Oracle eAM, this conversation will be well worth your time regardless of whether you choose to allow EAM Masters to help you through the process.

“The methods and technology used by EAM Masters enable them to be more cost efficient and effective than any other Oracle Maintenance service provider we have used.”
